

NEXUR

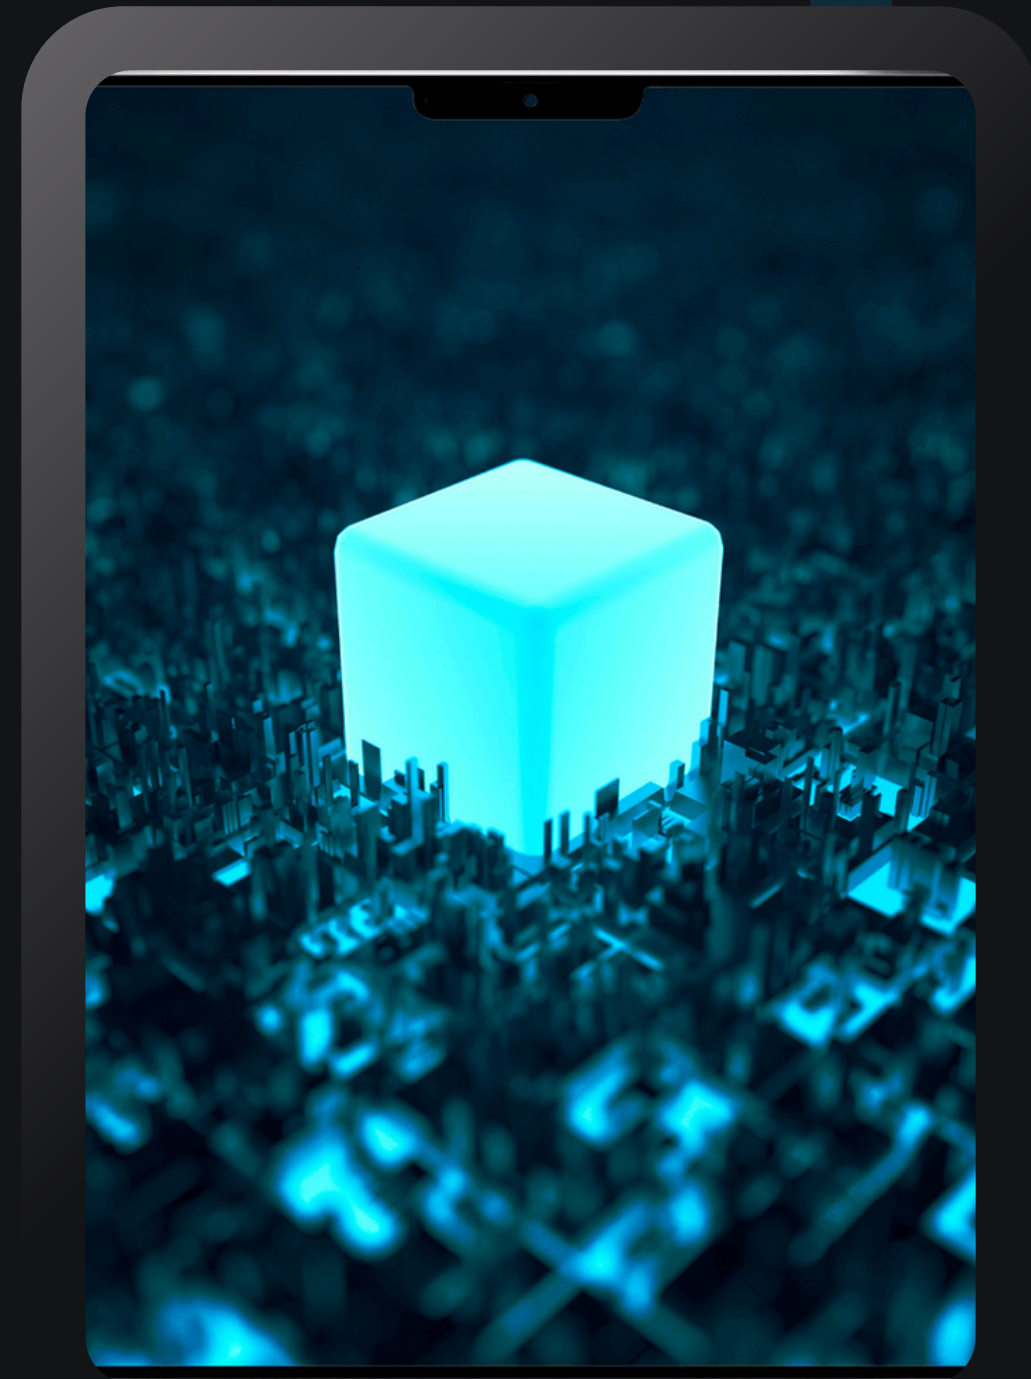

TECH CLUSTER

nexur.es

About us

The **NEXUR** Technology Cluster was created with the goal of promoting unity and visibility for technology companies established in Jerez and its surrounding area. Officially founded on June 4, 2024, after multiple meetings and business gatherings, NEXUR seeks to establish the region as a benchmark technology hub in southern Andalusia and Europe.

During a ceremony held at the Atalaya Museums, with the prominent participation of the Mayor of Jerez, the statutes were approved and the board of directors was elected. The official launch took place on July 4, 2024, marking a milestone in the region's digital transformation.

Institutional Collaborators

**Ayuntamiento
de Jerez**

City of
Jerez de la Frontera

ita de Andalu

Regional Gov.
of Andalucía

State Council
of Cádiz

Business Confederation
of Jerez

Institutional Collaborators

University
of Cádiz

Young Entrepreneur
Association of Cádiz

Museum
of the Atalaya

Chamber of Commerce
of Jerez

Cluster Objectives

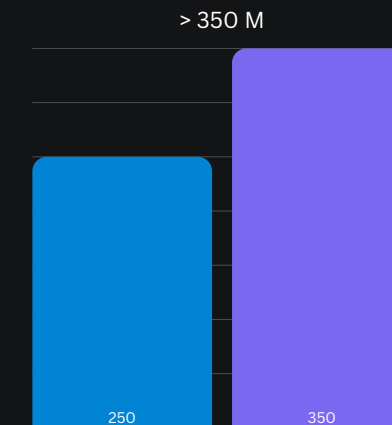

- 1 **Business Cooperation** | Foster collaboration between member technology companies to drive joint projects and strengthen the ecosystem.
- 2 **Synergies** | Identify shared interests and synergies that boost innovation and collective growth.
- 3 **Public–Private Collaboration** | Establish strategic alliances with institutions to promote regional technological development.
- 4 **Attracting Investment** | Attract investment to finance technology projects and accelerate the cluster's growth.

NEXUR Leverage

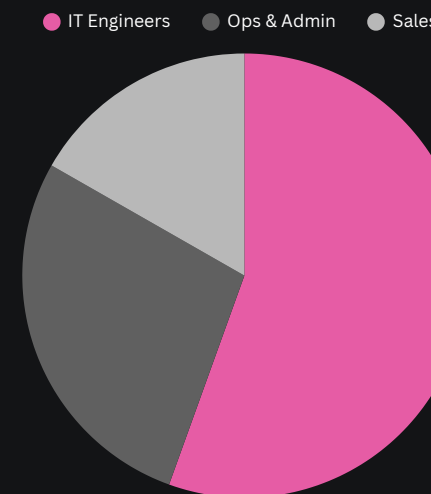

NEXUR is a fast-scaling technology cluster that has grown from 14 founding companies to over 30 members in two years, combining high-growth SMEs with established national and international technology groups.

Together, the cluster represents a workforce of more than 2,100 professionals and a significant aggregate economic footprint driven by recurring revenues, proprietary technology, and international operations.

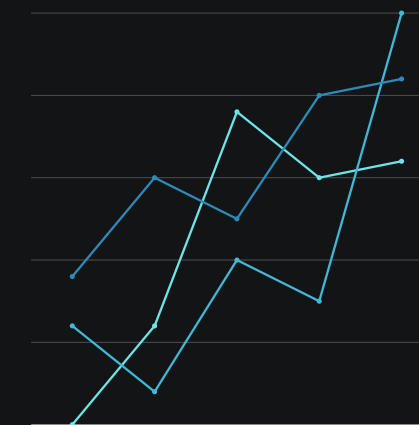

> 350 M €

Aggregate economic and financial capacity, including consolidated business groups with national and international operations, proprietary technological assets, and established client portfolios.

2,100 Workforce

NEXUR is not a micro-enterprise network but a technology cluster with critical mass, capable of executing large-scale, complex, and long-term digital and industrial projects while sustaining continuous innovation and economic growth.

Scale & Growth

NEXUR has grown from 14 founding companies to approximately 30 member companies in two years, more than doubling its membership base in a short time frame.

Tech Verticals

We concentrate capabilities across the core layers of the digital value chain. Member companies deliver **software engineering, product development, cloud infrastructure, telecommunications, managed IT services, enterprise cybersecurity, data engineering, advanced analytics, artificial intelligence and automation.**

NEXUR also covers **systems integration, DevOps, network and platform operations, plus technology consulting and digital transformation delivery.**

Cluster Infrastructure

The cluster operates various **data center facilities**, cloud and hosting platforms, and high-availability computing environments, complemented by **private fiber-optic networks**, carrier-grade connectivity, and telecommunications infrastructure designed for low-latency and mission-critical use cases. Members operate network operations centers, managed infrastructure services, and secure environments for regulated and high-reliability workloads. This infrastructure base supports scalable deployment, geographic redundancy, and continuous service delivery, positioning the cluster to **host, operate, and interconnect** complex digital systems for enterprise, industrial, and public-sector clients.

- **DIGITAL SERVICES**

The largest concentration of digital infrastructure and technical capacity in our region offering a unified ecosystem that supports secure, low-latency, and scalable digital operations.

- **ENGINEERING**

Advanced engineering capabilities across industrial automation, control systems, electrical and systems engineering, integrated with digital technologies.

NET ZERO

Carbon Neutral

Our philosophy is aligned with Net Zero by design, embedding energy efficiency and renewable-first principles across its digital and physical infrastructure. Located in a province with **over 4,400 hours of sunlight** per year, the cluster leverages exceptional solar potential to support clean energy generation and low-carbon operations. We are now advancing toward **full Carbon Neutrality**, extending its focus beyond operational emissions to include energy sourcing, infrastructure optimization, **Green Hydrogen Valleys** and long-term environmental impact reduction.

R&D at our core

Real NEXUR Tech Formation Center in Jerez

At the core of the cluster lies a research and development ecosystem built on **deep public-private collaboration** between technology companies, state and regional institutions, universities, and applied research centers. This model enables continuous knowledge transfer from academic research to real-world deployment, allowing innovation to be designed, tested, and scaled in operational environments. By aligning public bodies and private firms around shared technological objectives, the cluster strengthens applied R&D, industrial experimentation, and long-term innovation capacity, reinforcing its role as a catalyst for sustainable technological and economic progress.

Companies

AiCross

AiCross was born from a group of professionals from different disciplines and sectors to shape an idea: putting technology at the service of pedestrian safety.

aicross.es

ALSYS

Develops control and payment systems focused on biometrics and access; manages sports centers, time tracking, self-service cash registers, and biometric payments with FingertoPay.

alsyscontrol.com

Atlántic

Offers IT services such as resource professionalization, server security, digital transformation, digital presence, and cloud services, including Proxmox and Microsoft Copilot.

www.atlantic.es

Ayuda T Pymes

A consultancy that boosts entrepreneurship by offering free advice, labor support, tax savings, and account management for companies and the self-employed.

ayudatpymes.com

Companies

BookingFax

Digital marketing for the tourism sector, with multichannel outreach, webinars, training, branding, gamification, and a B2B channel for travel experiences.

bookingfax.com

CITED

Training and innovation center for business development, specialists in disruptive technologies.

cited.es

ControlNet

Provides digitization solutions, including VoIP, call management, online B2B/B2C sales, and online business control for sectors such as energy and pharmaceuticals.

controlnet.es

Cyberneticos

Hosting leader in Andalusia, offering hosting, servers, and domain registration services, with data centers in Spain and 24/7 support.

cyberneticos.com

Companies

Datono Fibra

Telecommunications operator offering fiber optic services, high-speed internet, mobile plans, and alarms in the province of Cádiz, focusing on rural areas without ADSL coverage.

datonofibra.com

Companies

Securesys

Provides cybersecurity solutions such as threat detection and risk management, protecting against cyberattacks.

securesyst.com

Surcontrol

Drives digital transformation with turnkey solutions in sectors such as Smart City, industry, defense, port logistics, automation, and robotics.

surcontrol.es

Windup

Company specialized in Digital Solutions with more than 10 years of experience based in Málaga. Digital strategy, training, advisory services, and talent management.

windup.es

Xerintel

Web and app development company with more than 18 years of experience, offering web design, web programming, application development, and IT and internet consulting.

www.xerintel.es

Companies

Phoenix Technologies

Dedicated to Artificial Intelligence, high-performance Cloud services and data sovereignty. Offers IaaS, PaaS, AI-as-a-Service models, and solutions for critical sectors such as healthcare.

phoenix-technologies.ch

Fitesa

Advisory, sales and distribution of agronomic products. Provides inputs and comprehensive solutions for agriculture, including crop protection products, plant nutrition, seeds, organic products, and technical advice from agronomist engineers and biologists.

fitesa.com.es

Incoder

Engineering technical services, consulting and technical assistance. Specialized in engineering and consulting for industrial traceability systems.

incoder.es

SinLimites

Comprehensive digital marketing services, web design and development, SEO/SEM, social media management, graphic design and branding.

slcomunicacion.com

our president

“

Technology only matters when it is created together and used responsibly. By uniting companies, engineers, and infrastructure around a shared future, we are proving that innovation, economic growth, and the protection of our planet can advance at the same pace.

”

— *José María Martín, President*
